

How to Install WA-GW

Download & Install WA-GW Bundling XAMPP

It will extract files to C:\WG

1. Before starting, **make sure that NET Framework 3.5 has been installed**

from start – run, write APPWIZ.CPL and enter, then click Turn Windows Features, thick Net Framework 3.5

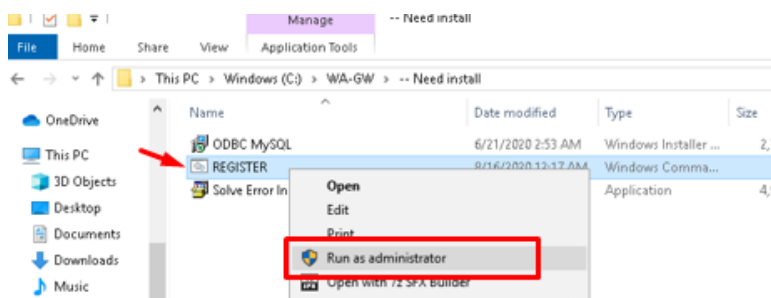

2. Go to the Folder - Need to install

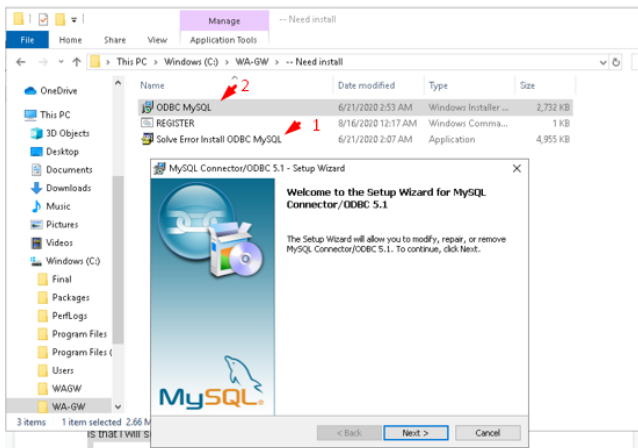

Click **REGISTER.bat**

Make sure the message exits is "Types registered successfully"

- If Failed, Right click - Run As Admin, If it still fails again, try to enter CMD as Administrator, then run it from CMD

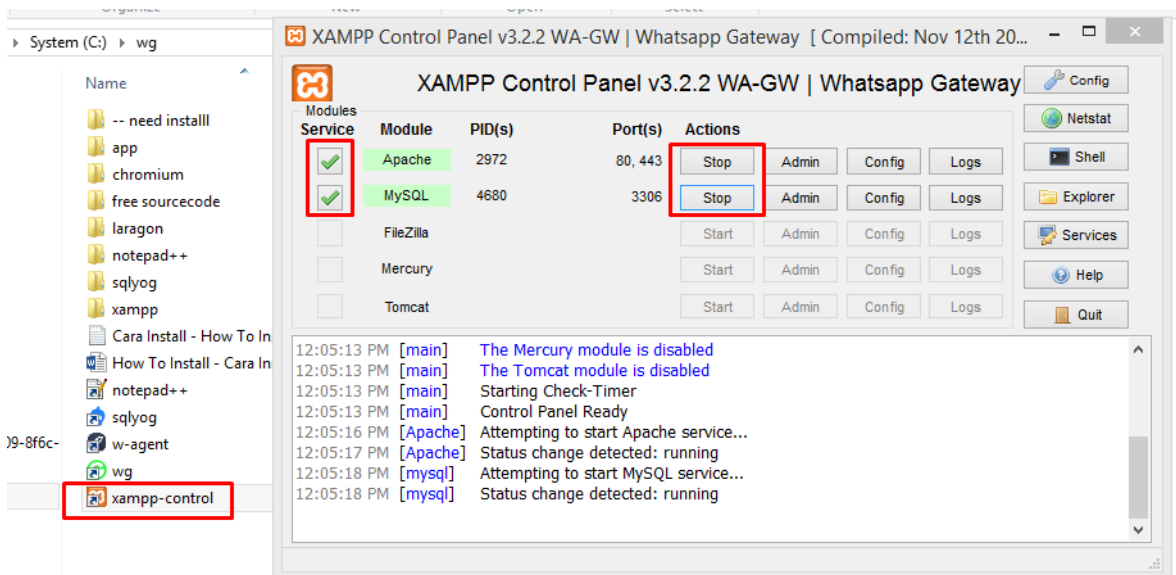

Then Install ODBC MySQL.. if Error, please run Solve Error ODBC, then reinstall ODBC MySQL again

4. Run Xampp Control

Make sure the Apache and MySQL services are active, if you want to run automatically every Windows startup, **Run as Admin first**, then install Service by thick, and click start Button

OK, if there are no problems installing. Then the WA-GW is ready to use :)

FOR MORE GUIDE / TUTORIALS .. SEE AT C: \ WG

After installing please join Facebook Group <http://fb.wa-gw.com>

Also see my videos on <http://youtube.wa-gw.com>

If you found this project helpful, it can make your job easier, you can earn your income with this, or you learned something from the source code and want to thank me..

consider buying me a cup of coffee, click here <http://donate.wa-gw.com>

Please advise & info if there is a BUG, ?? So I can fix it soon

Thank you, and Regards
